

ER Mapper Image Web Server

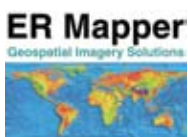

Distribute thousands of gigabytes of imagery, to thousands of concurrent users with a single server.

Integrate imagery without changing your existing GIS and IT infrastructure.

No requirement for costly, inefficient "retro-fitted" database solutions!

Leica
Geosystems

ER Mapper Image Web Server is a high-performance, specialized server application that efficiently distributes large volumes of geospatial image data to many users. By solving the infrastructure congestion problems associated with deploying large amounts of image data, Image Web Server frees your organization to utilize geospatial imagery in all its business processes.

Fast access to large quantities of imagery

Can your existing image server handle 300 image requests per second from many locations? Image Web Server can!

Robust architecture ensures maximum availability and complete scalability as your organization and image library grows.

Access images from all your applications

Access images served from Image Web Server from your desktop, web, mobile and server applications.

Easy, headache free management

Your Image Web Server can be up and running in a fraction of the time it takes to set up other solutions.

No database loading, pyramids or other intricate processing is required. Image Web Server directly accesses industry standard ECW and ISO standard JPEG 2000 image formats.

www.ermapper.com

Pain free deployment

ER Mapper Image Web Server requires no alteration to your core IT infrastructure. Add power to your applications without requiring radical changes.

Cost efficient

Expert engineering ensures that you won't have to keep spending money on expensive hardware to cater for your growing image serving requirements.

Secure

Lock down your image assets to only those clients with appropriate privileges. For example, restrict access based on image, region and resolution. Encrypt transmitted image data with industry leading security protocols.

Who uses ER Mapper Image Web Server?

ER Mapper Image Web Server is used worldwide by organizations that demand and expect the very best performance and results.

Image Web Server is used by local, state and federal governments, land information agencies, mineral and exploration companies, as well as defense departments.

Support for standards

Image Web Server supports common industry standards for image deployment. This includes ESRI's ArcIMS, ArcXML and OpenGIS™ Web Map service specifications.

Develop powerful custom applications

Image Web Server's open development framework makes it easy to create custom applications to exactly address your business needs.
